CASING & TUBING MAKE-UP

CASING & TUBING MAKE-UP

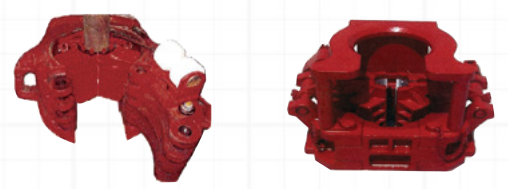

Tejas Tubular Oilfield Services provides tubular make-up services for both tubing and casing. We perform these services by utilizing integral tongs, computer and handling tools for tubing. Our services can be performed on carbon, alloy pipe and chrome pipe. Also for all connections Two-Step, API and Premium.

Tejas Tubular Oilfield Services utilizes suitable handling tools and accessories to do both Tubular & Casing running services. We prep using the appropriate compound and use the proper tongs and tools before running the tubing and casing down-hole.

Tubing: 2 3/8' - 4 1/2"

Casing: 4 1/2" - 13 3/8"

SPECIALIZED HANDLING TOOLS

Tejas Tubular Oilfield Services uses modified 175 Ton Air Slips. Slips are modified to ensure injection lines, control lines and umbilicals are not damaged during tubing run.

Our 350 Ton Spiders have been modified to enable large umbilicals to be safely run in conjunction with casing size landing strings.

The Pneumatic 200 Ton Elevator are designed to work effectively on derricks having top drives where operation requires tripping of work-string on rig where stabber is not utilized.
